7 CRITICAL DISEASES
Stroke
Heart attack (infarction)
Multiple (scattered) sclerosis
Kidney failure
Shunting of coronary artery
Transplantation of main organ
Tumor

IMEDI L

Stroke – Acute disorders of cerebral circulation accompanied by damage to brain tissue and disruption of its function. Stroke leads to permanent neurological injuries (the exception is a transient ischemic attack).

Heart attack (infarction) – Death of the part of the heart muscle as a result of an inadequate supply of blood that is confirmed by the episode of the pain in chest area; as well as by the changes and / or elevated enzymes revealed through the electrocardiogram.

Multiple (scattered) sclerosis – Multiple (scattered) sclerosis is a chronic, unpredictable disease of the central nervous system that is characterized by the most progressive course. This disease leads to the damage of the brain, vision nerves and spinal cord. It is also characterized by the emergence of chaotic scaly demilinized (degenerative nervous cells) cells. All this leads to disruption of the functions of the organism.

Kidney failure – kidney failure of the last stage, when there is a chronic, irreversible dysfunction of both or one kidney and regular renal replacement therapy (dialysis) or renal transplantation is required.

Shunting of coronary artery – The need for surgery on an open heart, recommended by a consultant or specialist cardiologist; shunting in order to reduce the narrowing or blocking of one or more coronary arteries (The exception is a balloon angioplasty (stenting), laser or any other procedure).

Transplantation of main organ– Transplantation of the heart, liver, lung, pancreas or bone marrow.

Tumor – Malignant tumor, characterized by uncontrolled growth, transmitted malignant cells and / or tissue invasion (tumor cells invasion in healthy tissue). The insurance limit covers the treatment of leukemia as well, however the exception is the following types of tumors:

- Non-invasive tumor;
- All forms of lymphoma (in case of human immunodeficiency virus);
- Kaposi's sarcoma - malignant tumor developed from blood vessels endocrine cells (in case of human immunodeficiency virus);
- Any type of skin tumor (except for invasive malignant melanoma).

# TO USE THE SERVICE YOU NEED THE FOLLOWING:

- ID card;
- Notice of the date of diagnosis to ensure that the customer was insured by that time;
- Detailed medical documentation of diagnostic services conducted;
